1. Introduction

Project Title: HouseHunt – Home Rental Platform

Team Members:

- Jhothika Chimata
- Renuka Sirolu
- Murala Lakshmi Laalasa

2. Project Overview

Purpose: HouseHunt is a MERN-based home rental platform for browsing, listing and managing rental properties.

Features:

- User Registration & Login
- Property Listings
- Search & Filters
- Property Details
- Add/Edit/Delete Property
- Responsive UI

3. Architecture

Frontend: React.js

Backend: Node.js + Express.js

Database: MongoDB with Mongoose

4. Setup Instructions

Prerequisites: Node.js, npm, MongoDB, Git.

Clone repository and install dependencies in frontend and backend using npm install.
Configure .env and start backend with npm start and frontend with npm run dev.

5. Folder Structure

```
frontend/  
backend/  
.gitignore
```

6. Running the Application

Frontend:
cd frontend
npm run dev

Backend:
cd backend
npm start

7. API Documentation

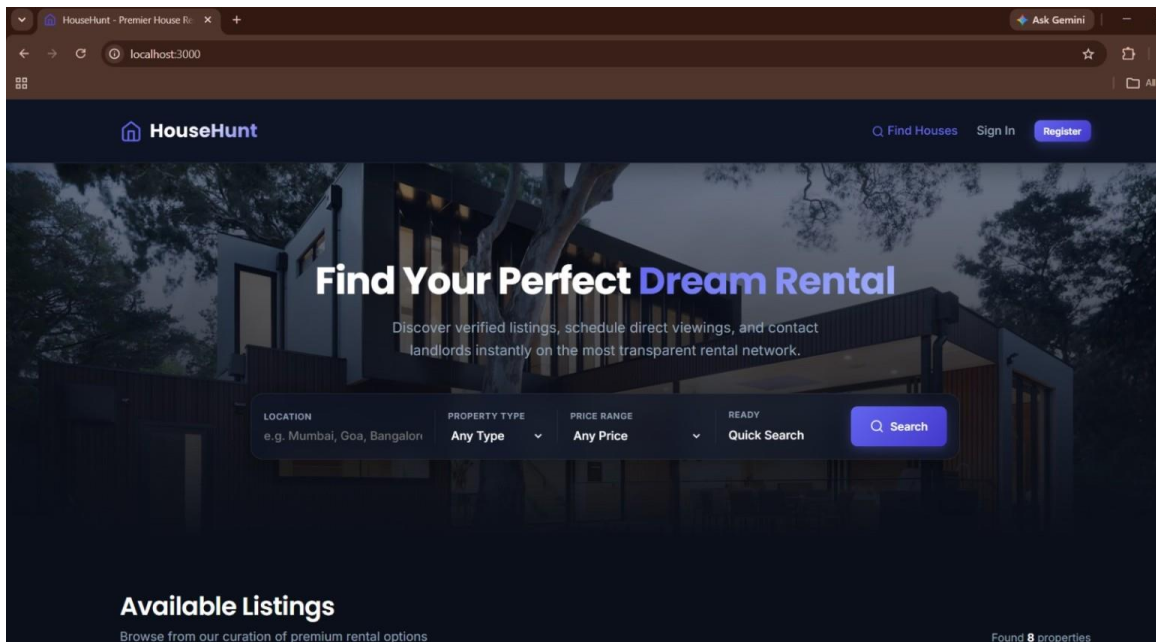

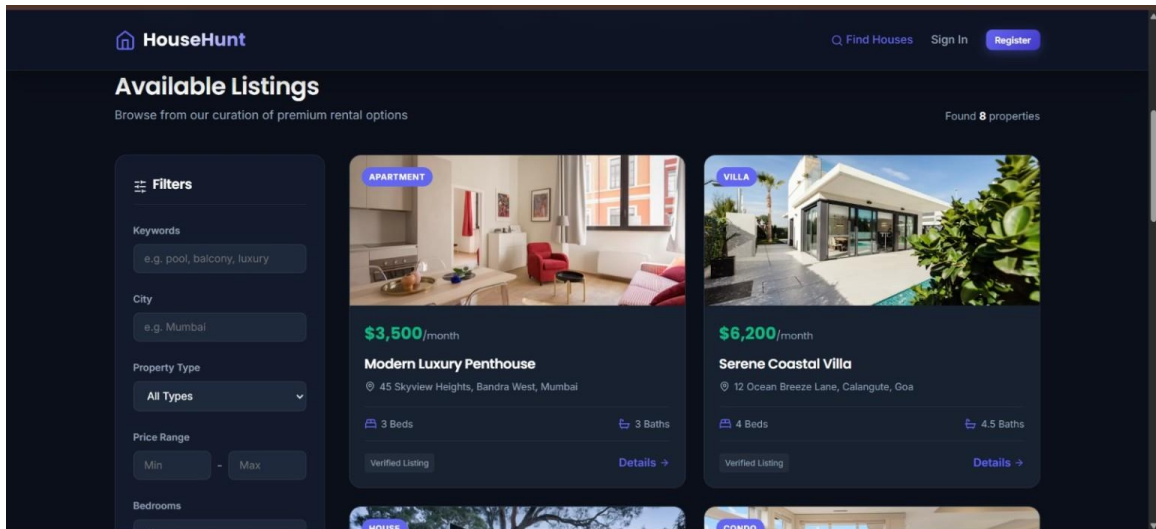

```
POST /api/auth/register  
POST /api/auth/login  
GET /api/properties  
GET /api/properties/:id  
POST /api/properties  
PUT /api/properties/:id  
DELETE /api/properties/:id
```

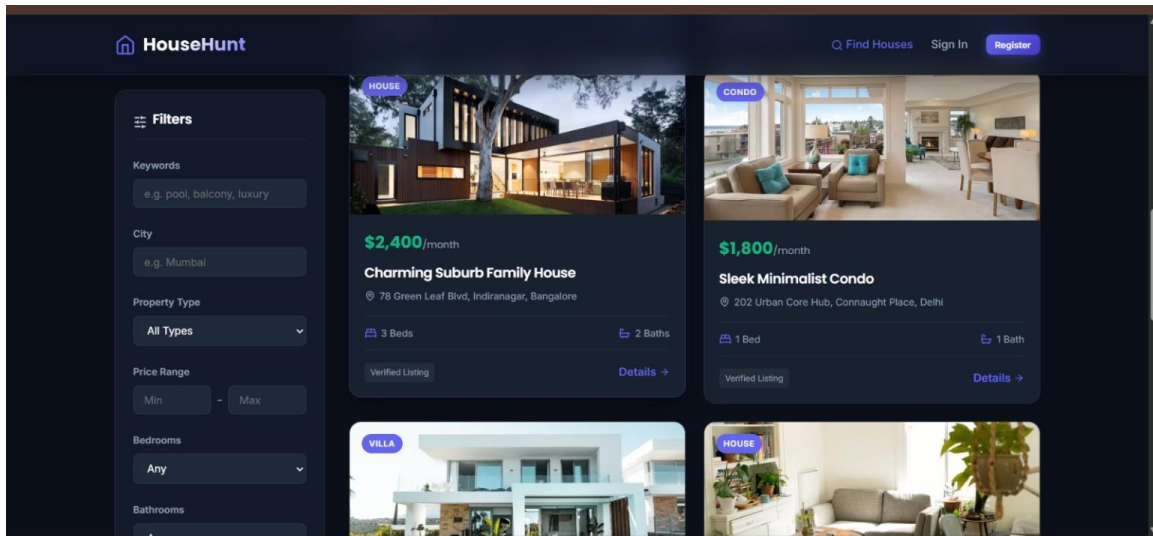

8. Authentication

JWT-based authentication is used to secure protected routes and authorize users.

9. User Interface

The following screenshots demonstrate the application's interface.

10. Testing

Tested user authentication, CRUD operations, API responses and responsive UI.

11. Screenshots or Demo

GitHub Repository: <https://github.com/renukasirolu/househunt.git>

12. Known Issues

Limited advanced filtering and performance optimizations are future improvements.

13. Future Enhancements

AI recommendations, Maps integration, Online payments, Chat system, Notifications, Mobile app.
